
DroneDeploy customers gain the confidence to take their businesses to new heights with our cloud-based software.

Your industry thrives on fast, shareable data. Your job site should be no different. DroneDeploy makes aerial data accessible and productive for everyone by transforming data collection and analysis across industries, including construction, energy, agriculture, and mining. Through interactive digital maps, 3D models, and in-depth analysis, our customers perform better, act faster, and make smarter decisions.

Create an interactive site view including maps, photos, panoramas, and video

- Easily fly using the DroneDeploy mobile app in autonomous or manual flight
- Safely fly using in-app pre-flight checklists and partnerships with LAANC providers
- Expedite pre-construction site planning and design from bid to earthworks with survey-grade maps
- Improve coordination with team members and clients using a visual record of site conditions
- Reduce direct risk to workers conducting inspections in hard-to-reach or unsafe locations

Quickly assess progress, issues, and opportunities across all sites

- Evaluate progress with design overlays and validate work with cut/fill analysis
- Detect stockpiles automatically, report value, and quantify inventory with Stockpile Reporting
- Detect damage and maintenance problems while maintaining photographic evidence
- Add annotations and measurements to any 2D or 3D map
- Share relevant maps and data layers with the field team to resolve site issues faster
About DroneDeploy

DroneDeploy is the leading enterprise-grade drone data platform. Trusted by brands globally, DroneDeploy makes the power of aerial data accessible and productive for everyone by transforming data collection and analysis across industries, including construction, energy, agriculture, and mining. Simple by design, DroneDeploy enables professional mapping, 3D modeling, and reporting from any drone on any device.

Enterprise-Grade Drone Software Solution

- Automate and centralize flight, operations, and compliance across distinct business units or office locations
- Manage data access with role-based permissions and SSO
- Get expert help on drone training, best practices, and program definition
- Integrate into applications you already use, such as Autodesk BIM 360, Procore, Bluebeam, OneDrive, and Egnyte
- Data is encrypted at rest and in transit, with secure cloud infrastructure, DDoS protection and ISO 27001 certification

With drone data, we've created a much more efficient process. We can literally take weeks out of the schedule, our projects are much higher quality than before, and they're safer.
